85-PR-24-46

Regions Hospital

To Whom It May Concern:

It is of our current medical opinion that ECT is no longer indicated nor being recommended as part of the treatment plan for David Russell. He is responding to the current medication neuroleptic regimen, which will continued to be assessed for response and optimization of treatment. As a result of this clinical improvement, we are writing to request that the Price-Shepard petition be dropped, case number 85-PR-24-46.

Sincerely,

Christine Stanson, MD
Medical Director, Inpatient Mental Health
